

# Welcome to the Gee Whiz Curriculum!

## What is the Gee Whiz Curriculum?

Gee Whiz is a comprehensive curriculum designed specifically for family child care programs ... like mine! It includes hands-on activities for all ages and helps me prepare your child for success in school and life. Here are just a few of the benefits this program has for your child.

- **Hands-On** - *Your child will learn by doing which is THE best way*
- **Comprehensive** - *All areas of development will be addressed*
- **Basic Skills Developed** - *Your child will be more than ready for school*
- **Aligned with State Standards** - *Gee Whiz helps me meet critical state requirements*
- **FUN!** - *Your child will have so much fun learning new things!*

**Just watch and  
listen to all I  
learn with  
Gee Whiz!**

## Want to learn more about the Gee Whiz curriculum?

The great thing about Gee Whiz is everything they do "lives" on their website [www.geewhizeducation.com](http://www.geewhizeducation.com). You can go there to view videos, read their blog, check out the materials and so much more.

# Family Contribution Worksheet

Use this worksheet to help you calculate the contribution each family would need to make in order to cover the cost of the Gee Whiz curriculum for one year (12 months). This worksheet is based on a yearly subscription price (\$192.95) which includes a 15% discount.

To use this worksheet, simply fill in the numbers to indicate the number of children in your program that would be contributing to the cost of the curriculum. Then, you will have this information to share with them.

**Yearly Cost of Gee Whiz = \$192.95**

$$\begin{array}{ccc} \$192.95 \div & \underline{\hspace{2cm}} & = \underline{\hspace{2cm}} \\ & \text{\# of children in your group} & \text{cost per child per year} \end{array}$$

**If you want to calculate a per month or per week cost per child, here is an example of how you would do that for a group of 6 children. Obviously, if you have a different amount of children in your group (e.g., 4, 7, 12, etc.), you would use that number instead of 6:**

## **EXAMPLE OF CALCULATION FOR A GROUP OF 6 CHILDREN:**

Yearly cost of Gee Whiz = \$192.95

Yearly cost per child based on a group of 6 children = **\$32.16 per year per child**  
Calculation: \$192.95/6 children = \$32.16 per child per year

Monthly cost per child based on a group of 6 children = **\$2.68 per month per child**  
Calculation: \$32.16 per child per year/12 months = \$2.68 per month per child

Weekly cost per child based on a group of 6 children = **62 cents per week per child**  
Calculation: \$32.16 per child per year/52 weeks = 62 cents per week per child
